## Claims:

- 1. Method for adjusting a hearing device in which one of several hearing programs can be selected, the method comprising the steps of:
  - identifying a momentary acoustic surround situation;
    and
- arranging the selectable hearing programs according
  to the identified momentary acoustic surround
  situation.
  - 2. Method of claim 1 further comprising the steps of:
    - determining a suitability measure for each of the selectable hearing programs, and
    - arranging the selectable hearing programs according to its suitability measures.
- Method of claim 2 further comprising the step of
  automatically selecting the hearing program with the
  highest suitability measure to operate the hearing device.
- Method of claim 2 further comprising the step of selecting the hearing program with the highest suitability
  measure after an activation signal has been received.
  - 5. Method of claim 3 further comprising the step of selecting a hearing program with a lower suitability measure upon receiving an activation signal provided that such a hearing program exists.
  - 6. Method of claim 4 further comprising the step of selecting a hearing program with a lower suitability

measure upon receiving an activation signal provided that such a hearing program exists.

- 7. Method of claim 5 further comprising the step of selecting a hearing program with the highest suitability measure upon receiving an activation signal and provided that a hearing program with the lowest suitability measure is currently selected.
- 8. Method of claim 6 further comprising the step of selecting a hearing program with the highest suitability measure upon receiving an activation signal and provided that a hearing program with the lowest suitability measure is currently selected.
  - 9. Method of one of the claims 4 to 8 further comprising the step of generating the activation signal by a remote control unit.
- 20 10. Method of one of the claims 4 to 8 further comprising the step of generating the activation signal by an input part of the hearing device.
- 11. Method of one of the claims 4 to 8 further comprising 25 the step of deriving the activation signal from a manually operated switch or from a code word detected by a speech recognition system.
- 12. Method of claim 1 further comprising the step of announcing an arrangement or a rearrangement of the selectable hearing programs acoustically.

- 13. Method of claim 4 further comprising the step of announcing an arrangement or a rearrangement of the selectable hearing programs acoustically.
- 5 14. Method of claim 9 further comprising the step of announcing an arrangement or a rearrangement of the selectable hearing programs acoustically.
- 15. Method of claim 10 further comprising the step of announcing an arrangement or a rearrangement of the selectable hearing programs acoustically.
- 16. Method of claim 11 further comprising the step of announcing an arrangement or a rearrangement of the selectable hearing programs acoustically.
- 17. Method of claim 1 further comprising the steps of being able to detect a further input source, and, if a further input source has been detected, of handling the further input source like a further acoustic situation.
- 18. Method of claim 3 further comprising the steps of being able to detect a further input source, and, if a further input source has been detected, of handling the further input source like a further acoustic situation.
- 19. Method of claim 4 further comprising the steps of being able to detect a further input source, and, if a further input source has been detected, of handling the further input source like a further acoustic situation.

- 20. Method of one of the claims 17 to 19 further comprising the step of treating the further input source as having the second best suitability measure.
- 5 21. Hearing device system with a hearing device in which the method of one of the claims 1 to 4 is operate-able.
